## Full-fledged screen reading software for Symbian phones

Mobile phones have become such an important communications tool in our personal and professional lives that not having access to them presents a serious obstacle. The traditional operation, based on visual information, puts them beyond the reach of blind and visually impaired users.

Mobile Speak is a screen reader that converts this visual information into speech. It works with mobile phones based on the Symbian platform, speaking all of the information displayed on the phone's screen, thereby giving the visually impaired the opportunity to use all of the features of these multifunctional devices.

Mobile Speak enables access to the applications on a Symbian phone:

- Receive and make calls.
- Access call lists.
- Access contacts.
- Write, send and receive SMS, MMS and Email messages.
- Manage the calendar.
- Set reminder alarms.
- Browse the net.
- Add tasks.
- Change profiles and configurations.
- Connect to other devices by Bluetooth or infrared.
- Access different tools.

Mobile Speak is offered in a variety of languages: American and British English, French, German, Spanish, Italian, Portuguese, Dutch, Danish, Finnish, Norwegian, Swedish, Icelandic, Arabic, Turkish, Polish, Chinese, Russian, Greek and Czech.

Consult our website for the complete list of supported phones for this product.

Mobile Speak is available through our global distributor network.
