

ClearNote+

Optelec
Tieman Group

Flexibility in the classroom

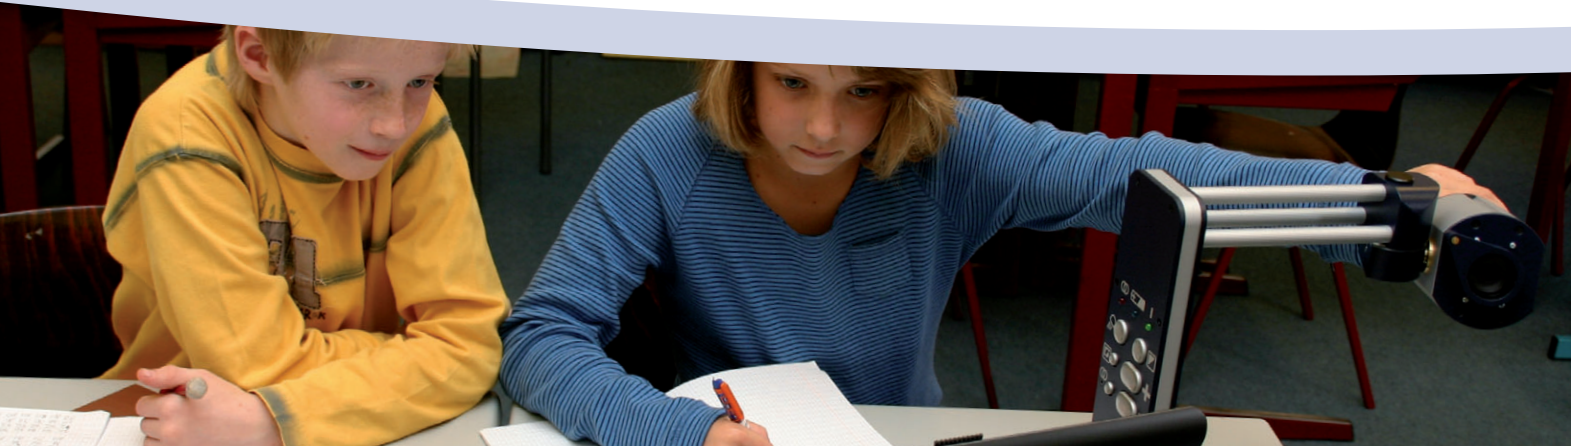

“Designed for use at school, Optelec’s ClearNote+ meets the requirements of students that need portability and ease of use”.

Point the camera to your school book and magnify up to 60 times on your laptop. Rotate the camera to the white board and bring distant text and images closer to your eyes. The magnification and viewing mode automatically re-adjust to their original settings, while turning the camera from near to distance viewing and back.

ClearNote+ connects easily to your PC or computer monitor, allowing you to view the camera image in full color, high contrast black/white, inverse or one of the nine color combinations.

The split screen functionality makes it possible to view the camera image and the image on your PC simultaneously. With a single key press you take a snapshot and store the image on your computer.

Combining near and distance viewing with a robust, portable and user-friendly design make ClearNote+ your ideal companion in the classroom.

Advanced features at the office

“Viewing the white board during a meeting, reading printed reports and accessing information on your PC simultaneously are only a few of the powerful features...”

Connect ClearNote+ to your PC and start reading printed documents behind your desk. Take it with you to a meeting, rotate the camera to the white board and magnify any information up to 60 times. As ClearNote+ is fully compatible with popular magnification

software, such as Lunar, LunarPlus, Supernova and ZoomText, you always enjoy complete and instant access to your PC. The split screen functionality allows you to view the camera image and the computer image simultaneously. The snapshot function captures and saves images for later reference.

Advanced features combined with a straightforward, portable and versatile design, make ClearNote+ ideal for use in any professional situation.

ClearNote+
